

# LIMESTONE

**LIMESTONE** is an exceptional sedimentary natural stone that has been appreciated for as long as time itself. Limestone offers depth, diversity, and soft texture to any living space, adding style, durability, and character. Choose the stone that resonates with your taste and personality to express your individuality.

Limestone can be found in many countries around the world. It is an organic sedimentary rock which means that is formed by the accumulation of shell, coral, and algae, or by direct crystallization from water. Because of this, some types of limestone may contain small fossils and marine skeletal fragments that give the stone a natural element. This stone works perfectly in a lot of applications as it is hardwearing, dense, and can be cut into assorted sizes and finishes.

Natural Stone Resources curated collection spans a wide range of colors, finishes and sizes. Field tiles, mosaics, trims, slabs, pavers, copings, wall caps and veneers. All our stones are also suitable for exterior, creating the ultimate indoor, outdoor flow with matching tiles.

### Applications & Maintenance

Commercial, Residential, Interiors, Exteriors, Floors, Walls, countertop, backsplash, landscape, pool surround, decks, and fireplaces. Limestone needs to be sealed during installation, once before and once after grouting to ensure its sealing as well. Limestone normally does not come Polished, and in a wet application like a shower, it should be a Honed finish. We recommend using a good quality penetrating breathable sealer and reseal it about every year. The stone will be more stain resistant and easier to maintain.

Most people do not mind if the stone acquires a patina over time. Others want to keep it like new, and the beauty of natural stone is that you can always have a professional restore it by regrinding and honing it. The less absorption that the limestone has, the less propensity it has to staining and the less maintenance required.
